MSc (Bac+5) EPITA, internship agreement | **Available immediately**

## Profile

MSc Artificial Intelligence student at EPITA looking for a 6-month end-of-studies internship as an AI Engineer in a back-end team. At Navyr.ai I took over an existing production AI assistant as its sole developer: I read and improved the code, fixed answers with wrong numbers, ran regression tests and documented the fixes. Python, APIs (FastAPI), MCP, SQL and LLM agents; interested in risk and financial data.

## Education

MSc Artificial Intelligence, **EPITA** (Bac+5, graduating 2027). Courses: Deep Learning, NLP & LLMs, RAG, MLOps, cloud computing, Paris | Sep 2025 – 2027

Diploma in Artificial Intelligence, **State University of New York** (online), USA | Mar – Sep 2025

B.Tech Information Technology, **JBIET**; ranked 5th in class, India | 2020 – 2024

## Experience

**AI Engineer Intern, Navyr.ai (AI decision-intelligence startup) – Paris** Aug 2026 – Nov 2026

– Took over the code base of a production AI assistant (Python, Claude on Amazon Bedrock, RAG) as sole developer: read, debugged and extended the existing back-end code.

– Improved the hybrid answer path: text-to-SQL on Amazon Athena (SQL generated by the LLM) for exact counts instead of letting the model estimate numbers, on a 19-column table from a 12-database programme.

– Product quality: tested 200+ real questions across 15 types; documented 13 failure patterns (incl. invented numbers and answers contradicting the data) and 28 issues; 14 fixes confirmed by regression tests.

– Proposed an MCP integration connecting the agent to an ontology engine so it can query data through tools; reviewed the new JavaScript/Bun platform code base and used Claude Code for code reviews.

– Assessed 11 data sources for value and feasibility (7 go, 4 with conditions); searched 23,334 finance use cases and wrote recommendations reviewed with the founders.

**Data Analyst, Edible Software Solutions – India** Jan 2025 – Sep 2025

– Multi-source SQL queries, data cleaning (pandas, Excel) and KPI dashboards in Power BI and Tableau.

**Machine Learning Intern, 360DigiTMG – Hyderabad, India** Jul 2024 – Dec 2024

– Prepared historical data with pandas for an LSTM forecasting model.

## Projects

**Multi-agent system with MCP** *Hackathon, team of 4, jury score 19/19*

3 agents (research, fact-checking, synthesis) orchestrated through MCP, cited answers, 3 control layers; LLM-as-a-Judge evaluation (11/11 factual answers, 3/3 out-of-scope refusals).

**Recommendation system on large data** *Team of 4*

22.6M reviews turned into 4.02M interactions; retrieval and LightGBM ranking served through a FastAPI API with Docker Compose, p95 latency 35.7 ms.

**RAG on financial filings** *NLP project, individual*

Local open-source Hugging Face models on FinanceBench (company financial reports), with source citations and experimental analysis.

## Skills

**Languages & back-end :** Python, SQL, JavaScript / TypeScript, FastAPI, REST APIs, Python SDKs, pytest, regression testing, Git, GitLab CI/CD, Docker

**AI & agents :** LLMs (Claude, Gemini), AI agents, tool calling, MCP (Model Context Protocol), LangChain, LangGraph, OpenAI Agents SDK, RAG, text-to-SQL, Claude Code

**Data & cloud :** PostgreSQL, pgvector, Amazon Athena, BigQuery, PySpark, pandas, AWS (Bedrock, S3, Glue, Lambda, ElastiCache), GCP, Kubernetes

## Languages

English: C1 (professional) | French: B1 (working toward B2) | Telugu, Hindi: native | Marathi: intermediate
